Save over \$20 (from products purchased separately) Plus, for a limited time get **Free Shipping**

Featuring...

Toilet Leak Detector

Test any toilet or urinal in less than 1 minute! Toilets consume 36% of all indoor household water and up to 10% of total household water is lost through leaking toilets. Most leaks cannot be seen or heard. One leaking toilet can waste 78,000 gallons of water per year. That's enough to fill 3 backyard swimming pools.

The Watermiser Power Showerhead™ provides excellent coverage, invigorating massage and high rinseability. Using innovative technology combining water with air, the Watermiser Power Showerhead™ feels as though it is using 2 – 3 times the actual water flow, saving up to 30 gallons of water, hot water, and sewer costs. Typically these showerheads produce flow rates of about 1.5 to 1.9 GPM (Gallons Per Minute).

Power Showerhead

Faucet Flow Control

Maintain water pressure while reducing water flow in faucets and hose bibs by up to 85%. These solid brass self-cleaning flow control devices are ideal for faucet water conservation. Located under the sink, these patented, tamper resistant faucet flow controls eliminate water waste while going undetected by the faucet user.
