

Our Fresh Water Supply

Two-thirds of the earth's surface is covered with water, yet less than 1% is available for drinking, bathing, cleaning, irrigation and manufacturing. The other 99% is salty, frozen or polluted. *

Watermiser® is a company that provides green technology tools for commercial, industrial, institutional and residential use - making life better, while saving significant amounts of water, energy and labor.

Watermiser® manufactures inexpensive, high quality water conservation devices that emphasize the efficient use of water. The patented **Watermiser® Waterbroom**, approved for use by the Metropolitan Water District, the Los Angeles Department of Water and Power, and the City of San Diego, among others, provides hard surface cleaning power to satisfy health and sanitation requirements. Using only about a tablespoon of water per square foot, the Watermiser® Waterbroom saves 75% or more of the water used by a hose or pressure washer.

Patented **Watermiser® Faucet Flow Controls™** are inexpensive solid brass fixtures that maintain water pressure while reducing water flow by up to 85% in faucets and hose bibs. Easy to install, they are clog and tamper resistant, and built to last. Trying to reduce water flow by using aerators presents many problems - aerators are easy to remove, and those who wish to increase water flow to a wasteful level simply unscrew them. They clog and corrode and require maintenance. Aerators used in sinks in public places are often removed to extract the screens for use in drug paraphernalia. Hospitals and other health conscious facilities are removing aerators to eliminate a moist environment that harbors disease. Faucet Flow Controls™ are installed under the sink, are not accessible to vandals, have no value to drug abusers, do not harbor disease - and provide a way to save water at the faucet, with or without the use of aerators.

10% or more of all toilets leak at any given time. Toilet leaks typically go unseen and unheard, yet can waste water at a rate of 200 gallons of water per day, enough water to fill 3 backyard swimming pools in a year. Fixing one leaking toilet has 10 times the impact of efforts to just meet the Metropolitan Water District of Southern California's 20 gallon challenge. **Watermiser's® patented 5 Second Toilet & Urinal Leak Detector™** can test any type of toilet or urinal for leaks in seconds, unlike dye tablets which cannot be used for urinals or tankless toilets or toilets using colored cleaning tablets, and take up to 20 minutes to work.

Water wasted in showers is a common occurrence, known all too well by anyone with a teenager or other family member who 'enjoys a long hot shower'. Restrictive showerheads are the obvious solution, but execution of this seemingly simple answer has been weak. Many low flow showerheads from other manufacturers have a water flow so low that they are unusable, and the showerheads end up in landfills. Some of these showerheads can be modified to defeat the water saving features, and thus foil the purpose for which they are intended. Fortunately, **Watermiser Power Showerheads** combine the power of water and air - using less water while providing an invigorating shower experience.

Watermiser® is a proud member of the Green Community, determined to provide practical solutions to pressing needs. Watermiser® - saving the planet, one drop at a time.

Please visit www.watermiser.com for more information on water saving solutions from Watermiser.
